

ELECTRICAL VEHICLE INFRASTRUCTURE & PARKING

PRODUCT OVERVIEWS

ATS Traffic has over 55 years of experience working with communities across Canada to create safer traffic conditions. We understand that the future of transportation is in renewable energy and the creation or adaptation of infrastructure to accommodate these new innovations.

Impact Recovery Systems (IRS)

ATS Traffic has a range of bollard posts from Impact Recovery Systems (IRS), designed for heavy use and to resist damage. These bollard posts are suited for wayfinding and directional signs and enhancing parking lots without worrying about constant repair and replacements.

Thermo-Plastic Pavement Markings

The Geveko Plastiroute is ATS Traffic's preferred cold plastic application. Suited for large application in a variety of climates and patterns, Plastiroute can be applied with ordinary tools and non-electric machines for a variety of purposes.

ATS Traffic recommends Geveko's suite of thermo-plastic marking templates with proven durability on a wide variety of pavement surfaces. These templates cover a wide variety of symbols and shapes without extensive surface preparation. Quick and easy to apply in a variety of colours.

Signage

ATS Traffic offers a wide selection of custom and regulatory signage that complies with all local specifications and standards. We are a certified 3M Manufacturer, using the latest in 3M Diamond Grade technology to make durable, visible, reflective signs.
