

PROTECTING WHAT MATTERS MOST

Garland's core focus has always been on keeping our employees, customers and communities safe. We've done so for the last 125 years by providing waterproofing solutions for the entire building envelope. The world's current health crisis has prompted us to look beyond our traditional offerings to provide you with new and more powerful ways to protect your facilities.

Garland's new **Defense Force™** line of innovative products is designed to either **clean, disinfect and/or protect commercial facilities** while also helping combat sick building syndrome. We know protecting the outside of your building is the first step in protecting the people inside. And to us, there is nothing more important.

Why Consider the Health of Your Building?

1 OUT OF 4
buildings in the U.S. can
be classified as **SICK***

64 MILLION WORKERS
frequently experience two or more symptoms
associated with sick building syndrome at work

Indoor air pollution
ranks as one of the
TOP 5 environmental
risks to public health

GARLAND'S HEALTHY BUILDING SOLUTIONS

Our **Defense Force™** line of products are safe, environmentally conscious and are designed to provide powerful protection for the health of your building.

Disinfect & Decontaminate

The first step in achieving healthy buildings includes disinfecting high-traffic exterior areas at schools and office buildings like doors, sidewalks, stairs, railings, community spaces and playgrounds. Garland's Defense Force line of products features the world's most effective antimicrobial disinfectant and chemical decontaminant, promoting cleaner, healthier and safer buildings.

Protecting Our Customers

It's about taking the necessary steps - big or small - to improve the health of your building and ultimately protect the health of those inside. Cleaning and sealing walls and roofs can improve indoor air quality issues and prevent problems with mold and mildew, helping to reduce incidences of illness associated with sick building syndrome.

The Defense Force line of products support the entire building envelope and have been ideally designed for exterior application on food & beverage facilities, K-12 schools and higher education, municipal buildings, office buildings, multi-family buildings and health care facilities.

Combat Leaks

Garland has a range of repair, restoration and replacement options for roofs and walls to get your building back in watertight shape. Eliminating water penetration into the building reduces the risk of mold and bacteria growth, ensuring a healthy and safe facility.

Clean Bill of Health

The first step in getting your building back on the road to health is contacting your local Garland representative for a free building envelope inspection. Let your local Garland rep evaluate the condition of your building's exterior and recommend appropriate solutions for your review.

Contact your local Garland representative for more information.
